

iWitnessPRO

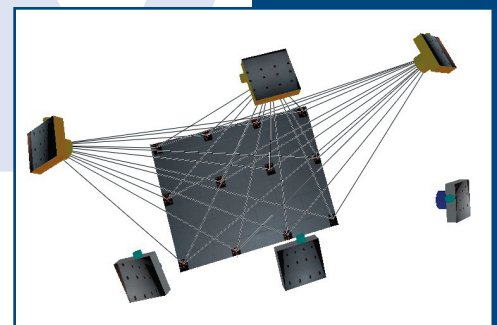

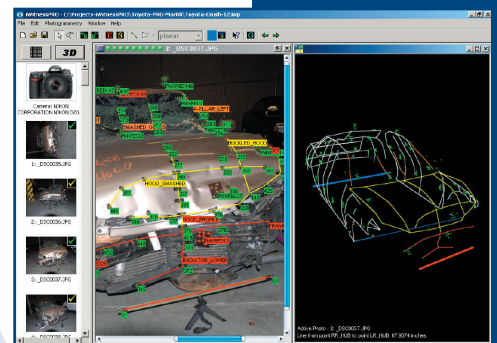

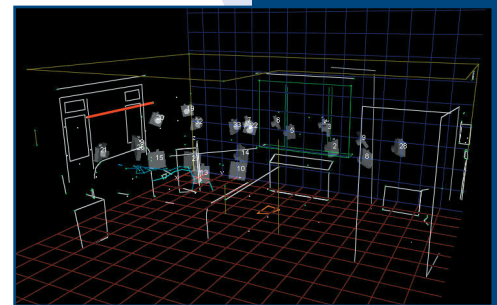

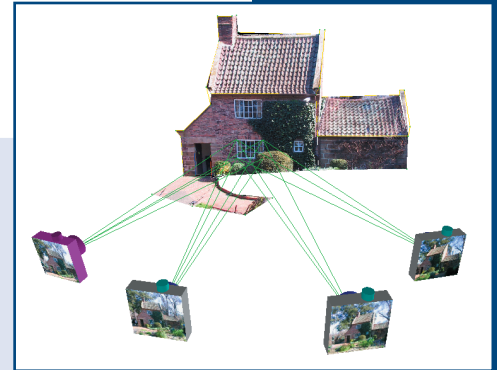

Close Range Photogrammetry

An affordable and exceptionally easy-to-use automatic close-range photogrammetry system that provides fast and accurate 3D measurements from images recorded with both consumer-grade and professional cameras.

- Very intuitive and simple to operate
- Fully automatic network orientation and 3D point measurement via coded targets
- Automatic camera calibration, as well as on-the-job self-calibration
- Robust and reliable error detection through on-line data processing
- Flexible generation of photo-textured 3D models
- Auto-assisted image marking and referencing leading to high-accuracy XYZ coordinates
- Suited to combined automatic and manual measurement for optimal feature point determination

iWitnessPRO is widely used in engineering, architecture, heritage recording, animation and modeling, and especially in accident reconstruction and forensics.

With its ease of use, **iWitnessPRO** is an ideal tool for teaching.
